PROFILE SUMMARY

Computer Science undergraduate (CGPA 9.61) with strong foundations in data structures, algorithms, and core computer science systems. Experienced in building backend-driven web applications and applied machine learning pipelines, with hands-on exposure to secure system design, data modeling, and end-to-end project ownership.

EDUCATION

SRM University, Amaravati

B.Tech, Computer Science and Engineering

2022 – 2026

CGPA: 9.61 / 10.0

PROFESSIONAL EXPERIENCE

Software Development Engineer Intern — HashedIn by Deloitte

April 2026 – August 2026

Bangalore

- Designed and implemented end-to-end application architecture using **React, Redux Toolkit, Python, and FastAPI**, owning frontend architecture, API contracts, state management, service integration, and core application workflows.
- Engineered **REST APIs** and enterprise integrations with **GitHub and Jira** for **PerfPilot**, an employee lifecycle platform, designing service workflows for structured data retrieval, processing, and application-level consumption; team ranked **Top 5 out of 17 teams**.
- Built AI-assisted application workflows using **RAG, LLMs, vector retrieval, and Wispr-based transcription**, integrating AI capabilities into production-oriented application flows with backend services and APIs.
- Worked across **Databricks, SQL, Angular, FastAPI, RAG, and data engineering**, contributing to system design, backend integration, application development, and end-to-end feature delivery.

PROJECTS

AI Agent Factory v2

FastAPI — Generative AI — SQLite — Streamlit

- Built a **Generative AI** application that converts source requirement documents into architecture plans and code-generation workflows, reducing manual specification work.
- Designed a **FastAPI** backend and **Streamlit** interface to orchestrate and monitor multi-stage AI workflows in real time.
- Implemented **document ingestion, semantic retrieval, and workflow orchestration** with **Human-in-the-Loop** validation to improve the reliability of AI-generated requirements and architecture plans.

Nexus — Agentic RAG Platform

Databricks

- Designed and built an **Agentic RAG** application on **Databricks** for natural-language Q&A over software requirements documents, replacing manual document search with semantic retrieval.
- Engineered a **Bronze → Silver → Gold** pipeline with **semantic chunking, embeddings, Databricks Vector Search, and reranking** to improve retrieval relevance.
- Architected **RAG, Tool, and Web query routing** and integrated **Unity Catalog, MLflow, Genie, Lakeflow Jobs, and Databricks Apps** into a unified application workflow.

TheLook — Data Engineering Platform

Databricks — Delta Lake — Apache Spark — dbt

- Built an end-to-end **Databricks** data engineering platform using **Medallion Architecture** for reliable ingestion, transformation, and analytical processing.
- Implemented **data quality validation, quarantine handling, and incremental processing** using **Delta Lake** and **Apache Spark**, maintaining idempotent and auditable pipelines.
- Developed **SCD Type 2** models, **dbt models/tests**, **PII governance and masking**, and **observability controls** to improve production readiness.

TECHNICAL SKILLS

AI / Generative AI: Generative AI, RAG, Agentic AI, LLM Applications, AI Workflows, Vector Search, Embeddings

Languages: Python, Java, C++, TypeScript, JavaScript, SQL

Frameworks: FastAPI, React, Streamlit, Spring Boot, Angular

Data & Cloud: Databricks, Apache Spark, Delta Lake, Unity Catalog, Databricks Vector Search, dbt

Databases: SQLite, PostgreSQL, MongoDB, MySQL

Engineering: REST APIs, Git, Docker, JWT, WebSockets, Agile/Scrum

Core CS: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, Software Engineering

CERTIFICATIONS

Agile Project Management — Google • MongoDB for Node.js Developers — SmartBridge
